PROFESSIONAL SUMMARY

React Native Developer with **3+ years** of experience building, shipping and maintaining production-grade **Android and iOS** applications across fintech banking, loan management, e-commerce and real-time fantasy sports. Hands-on with **React Native New Architecture (Fabric, Turbo Modules, Hermes)** and writes custom native modules in Kotlin, Java, Swift and Objective-C. Upgraded 5 live apps from v0.64 to v0.83 with zero downtime, cut release cycles by ~60% through CodePush OTA updates, and delivered a banking app now live in Egypt, Sudan and UAE. Strong in TypeScript, Redux Toolkit, REST API integration, performance tuning, mobile security and CI/CD with GitHub Actions.

KEY ACHIEVEMENTS

- **Zero-downtime upgrades:** migrated 5 production React Native apps from v0.64 to v0.83, resolving every native dependency conflict.
- **~60% faster releases:** introduced a CodePush OTA pipeline, so hotfixes no longer need app-store resubmission.
- **60 FPS at scale:** kept scrolling smooth on lists of 1,000+ records through FlatList virtualization.
- **3-country launch:** delivered the Taqset fintech banking app in 6 months; live in Egypt, Sudan and UAE.
- **Live-match concurrency:** supported thousands of concurrent users on a real-time fantasy sports platform.

CORE COMPETENCIES

Mobile Development: React Native (v0.64 - v0.83), JavaScript (ES6+), TypeScript, Expo, Android, iOS, Cross-Platform Development

React Native Architecture: New Architecture, Fabric, Turbo Modules, Hermes, React Navigation v6, Deep Linking, Universal Links, Android App Links

Native Development: Kotlin, Java, Swift, Objective-C, Custom Native Modules, Unity Bridge Integration

State Management: Redux Toolkit, Context API

UI & Performance: Reanimated v2, Gesture Handler v2, FlatList Virtualization, UI Optimization, Performance Profiling

Backend & APIs: REST APIs, Node.js, Firebase, Appwrite, Convex

Databases: MySQL, MongoDB

Mobile Security: AES Encryption, Cryptographic Hashing, Keychain Secure Storage, VAPT Compliance

Notifications & Payments: FCM, APNs, Push Notifications, In-App Purchases (Android & iOS)

DevOps & Tools: Git, GitHub Actions, CI/CD, CodePush (OTA), Firebase App Distribution, Sentry, Crashlytics, Flipper, Android Studio Profiler, Xcode Instruments

PROFESSIONAL EXPERIENCE

Software Developer (React Native) | Mypcot Infotech Pvt. Ltd., Mumbai

Jul 2023 - Present

- Upgraded 5 production apps from React Native v0.64 to v0.83, resolving native dependency conflicts and releasing with zero downtime.
- Built custom Native Modules in Kotlin, Java, Swift and Objective-C, including a Unity game engine bridge that runs in-app games without a standalone binary.
- Adopted the New Architecture (Fabric renderer, Turbo Modules, Hermes) to reduce cold-start time and improve UI thread throughput across production apps.
- Set up an OTA update pipeline with CodePush, removing app-store resubmissions for hotfixes and shortening release cycles by ~60%.
- Optimized FlatList virtualization for datasets of 1,000+ records, holding a steady 60 FPS scroll.
- Engineered drag-and-drop interfaces and physics-based animations with Reanimated v2 and Gesture Handler v2.
- Implemented real-time live score feeds and player updates for thousands of concurrent users during live matches.
- Configured deep linking and multi-stack navigation with React Navigation v6, supporting Universal Links (iOS) and App Links (Android).
- Built push notification pipelines with FCM and APNs, including channel management and background notification handling.

- Integrated Firebase, Appwrite and Convex for authentication, cloud storage and real-time sync; implemented in-app purchases on Android and iOS.
- Maintained GitHub Actions CI/CD pipelines for automated builds and Firebase App Distribution beta releases; monitored production with Sentry and Crashlytics.
- Diagnosed performance bottlenecks and native crashes using Flipper, Android Studio Profiler and Xcode Instruments.
- Secured sensitive banking data with AES encryption, cryptographic hashing and Keychain Secure Storage.

PROJECTS

Taqset – Fintech Banking Application | Live in Egypt, Sudan & UAE

Tech Stack: React Native, Kotlin, Swift, AES Encryption, Keychain | Android & iOS

- Built an Islamic banking app integrating local bank partnerships to deliver exclusive discounts and benefits to users in three countries.
- Architected multi-bank card management with transaction routing that sends API calls to the correct payment switch based on card data.
- Created a service provider panel that lets third-party vendors manage their own services and products without admin dependency.
- Protected financial transactions with AES encryption and secured credentials with cryptographic hashing and Keychain Secure Storage.
- Shipped the full product in 6 months and maintain it in production.

CLMS – Client & Loan Management System | Production

Tech Stack: React Native, Redux Toolkit, React Navigation v6, MySQL | Android, iOS & Web

- Developed a central client platform for communication tracking, follow-up scheduling, interaction history and automated email notifications.
- Implemented the full loan lifecycle, from application to repayment, with live status updates and team collaboration.
- Wired deep links from email notifications straight to the relevant loan record using React Navigation v6 multi-stack navigation.
- Virtualized lists of 1,000+ records with zero frame drops and added customizable project templates for team workflows.
- Completed a zero-downtime migration across a major React Native version jump, resolving all third-party native dependency conflicts.

Trolley – Online Grocery Shopping App | Production

Tech Stack: React Native, REST APIs, PHP | Android & iOS

- Launched a grocery app with same-day delivery, scheduled delivery windows and contactless delivery.
- Integrated REST APIs for product catalog, inventory sync and a multi-step checkout supporting multiple payment gateways.
- Designed a user-centric interface with personalized recommendations, transparent pricing and easy returns to lift engagement and conversion.

Fantasy 11 – Fantasy Sports Platform | Production

Tech Stack: React Native, Node.js, MongoDB, Reanimated v2, Gesture Handler v2 | Android & iOS

- Built a fantasy sports app where users create virtual teams from real players, compete in leagues and win cash prizes based on live statistics.
- Delivered real-time score feeds and performance updates to thousands of concurrent users during live matches.
- Engineered a drag-and-drop team builder with physics-based animations using Reanimated v2 and Gesture Handler v2.
- Applied encryption to protect user data and cash-prize financial transactions.

EDUCATION

Bachelor of Engineering – Electrical Engineering

Jun 2018 – Jun 2022

Punyashlok Ahilyadevi Holkar Solapur University, Solapur, Maharashtra
